## Trigonometric functions?

Posted by Jeff - 2008/08/28 22:07

---

Is there anywhere in the help files that documents which trigonometric functions are available in CeeBot? In particular, is arctan available?

In the general text about the CBOT language, click the "expressions" link, there you will find a description of the functions available in CBOT. In particular, asin, acos and atan are available for the inverse trigonometric functions.
