I downloaded CeeBot4, but there is a problem with the graphic display in the simulator: the upper half is not displayed properly. Any idea how I can fix this?	Problem with display in CeeBot sin	nulator

Hi Jeff,	Hi Jeff,	
sorry you have got this problem with CeeBot. As far as I know, all those problems could be sorted out by installing the last version of the driver for your 3D card. You can find it on the website of the producer. Many 3D cards are sold with drivers which are not properly tested, updates will correct these bugs.	last version of the driver for your 3D card.
